

Global Vaccine Action Plan

Secretariat Annual Report 2016

Priority Country report on progress towards GVAP-RVAP goals

UGANDA

A. Progress towards achievement of GVAP goals

1. Summary

This summary table describes the current situation in Uganda regarding achieving the GVAP goals. Data used to assess progress towards achievement of GVAP goals are included in the annex (Country immunization profile).

Area	Indicator	Data for Uganda
4. Rubella/CRS Elimination	Rubella-containing vaccine coverage	Not introduced
	SIAs planned?	Planned for 2018

3.2.2 Achieve measles elimination and rubella & CRS elimination

Rubella

According to informants, rubella outbreaks have been occurring, and many suspected cases of measles that are not lab-confirmed are believed to be rubella. For instance, while the routine disease surveillance system reported more than 60,000 cases of measles in 2015, many of these are believed to have been rubella. To quickly reduce rubella transmission in the population, UNEPI is planning MR catch-up campaigns in 2018, with GAVI support.
